This nucleotide sequence represents a portion of the cDNA insert conclose ceb5.pk0049.h5 encoding a portion (see AAV31897) of a corn cyclin delta-2 pk01ypeptide. The clone was isolated from a corn cc embryo (20 days after pollination) cDNA library. The invention cc relates to isolated nucleic acid fragments (see AAZ19953-66) encoding cc cyclin A, cyclin delta-1, cyclin delta-2 and cyclin delta-3 cc polypeptides (see AAV31889-902). It also relates to the construction cc of chimeric genes encoding all or a portion of a cyclin, in sense cc antisense orientation, where expression of the chimeric gene cc results in altered levels of the cyclin protein in a transformed cc of cell division in those cells. The nucleic acid fragments may be culture growth. The availability of nucleic acid sequences encoding cl large protein of cyclins should facilitate studies of cell cycle culture, increase the efficiency of gene transfer and help provide contents that may be effectioney of gene transfer and help provide contents that may be inseful as horbiciaes
                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated plant cyclin genes, used to herbicides and for developing plant breed \ensuremath{\mathsf{herbicides}}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cahoon RE,

                                                                                                                                                                                                                                        This sequence represents the CYCD3;1 cDNA from Nicotiana tabacum which encodes a D-type cyclin. The sequence can be used to alter the growth characteristics or architecture of plants by altering the (functional) level in the plant cells of a cell-division controlling protein that can bind to, or phosphorylate, an Rb-like protein, such as a D-type cyclin. Modulation of the cyclin gene is used to increase or decrease the growth rate provide feater consideration and the cyclin gene is used.
                                                                                                                                                                                                                                                                                                                                                                                                Regulating growth and structure of plants by modulating protein th controls cell division - specifically a D-type cyclin, and related chimeric genes and transformed cells and plants, used to alter

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                encodes a D-type cyclin. The sequence can be used to alter the growth characteristics or architecture of plants by altering the (functional) level in the plant cells of a cell-division controlling protein that can bind to, or phosphorylate, an Rb-like protein, such as a D-type cyclin. Modulation of the cyclin gene is used to increase or decrease the growth rate, provide faster germination, reduce thuse to flowering, increase the number of flowers, seeds or fruits per plant, increase root development, reduce height and to delay flowering in a range of plants, e.g. legumes, grasses, maize, oilseed rape, wheat, tomato, rice, barley, sunflower,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence represents the CYCD1;1 cDNA from Helianthus tuberosus which encodes a D-type cyclin. The sequence can be used to alter the growth characteristics or architecture of plants by altering the (functional) level in the plant cells of a cell-division controlling protein that can bind to, or phosphorylate, an Rb-like protein, such as a D-type cyclin. Modulation of the cyclin gene is used to increase or decrease the growth rate, provide faster germination, reduce time to flowering, increase the number of flowers, seeds or fruits per plant, increase root development, reduce height and to delay flowering in a range of plants, e.g. legumes, grasses, maize, oilseed rape, wheat, tomato, rice, barley, sunflower,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Regulating growth and structure of plants by modulating protein controls cell division - specifically a p-type cyclin, and relat chimeric genes and transformed cells and plants, used to alter growth rate, flowering, seed production etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 1788

The sequence can be used to alter the growth characteristics or architecture of plants by altering the (functional) level in the plant cells of a cell-division controlling protein that can bind to, or phosphorylate, an Rb-like protein, such as a D-type cyclin. Modulation of the cyclin gene is used to increase or decrease the growth rate, provide faster germination, reduce time to flowering, increase the number of flowers, seeds or fruits per plant, increase root development, reduce height and to delay flowering in a range of plants, e.g. legumes, grasses, maize, oilseed rape, wheat, tomato, rice, barley, sunflower, carnation chryganthemum race, tilin other, and the control of the cyclin of the c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Regulating growth and structure of plants by modulating protein controls cell division - specifically a D-type cyclin, and relat chimeric genes and transformed cells and plants, used to alter growth rate, flowering, seed production etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   synthesized from mRNA using a poly(dT) sequence with a NotI restriction site. Sall linkers adapters were ligated to the blunt-ended cDNA fragments followed by NotI digestion. The cDNA fragments were directionally cloned into the NotI-Sall restriction site of the pSPORT1 vector. The ligated cDNA fragments were transformed into E. coli ElectroMax DH10B host cells. This library was constructed by Dr. Lila Vodkin and Dr. Anu Khanna. Note that Gm-r1030 is a re-rack of Gm-c1007."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        5105595818
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 5105595773
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              oandersn@pw.usda.gov
                                                                                                                                                                                                                                                                                                                                                                                                     dishes. Roots were harvested. The tissue, total RNA, poly(A) RNA were prepared, a cDNA library was made i TJ Close lab (Choi, Close, Fenton) at the University California, Riverside. The cDNA clones were in vivo excised to give pBluescript phagamide hafacrants.
                                                                                                                                                                                                                                  excised to give pBluescript phagemids before normalization was carried out. The mass excision of phagemid library and normalization were done in HT Ng lab by D. Zhang at Texas Tech Univeristy. Normalizati protocol used was that of Soares. Plasmid DNA preparations and DNA sequencing were performed in the Anderson lab (all other authors)."

/note="Organ: shoot tips: Vector: Lambda TriplEx; Site_1: SfiI (A); Site_2: SfiI (B); Shoot tips (approx. 2 cm from apex) were collected during the spring, frozen and used for mRNA isolation. The SMART-PCR method (Clontech) was used to prepare a library from 1 ug total RNA, using the Lambda TriplEx vector. Plasmid subclones in pTriplEx were recovered by cre-lox excision in E. coli strain BM25.8 and sequenced from the 5' end."

/note="Vector: pBluescript II SK+; Site_1: EcoRI; Site_2: Anote="Vector: pBluescript II SK+; Site_1: EcoRI; Site_2: XhoI; The cDNA library was constructed from mRNA isolated from mature seed pods of greenhouse grown plants prior to senescence for the cultivar KP1. Complementary DNA was synthesized from mRNA using a primer consisting of a poly(dm) sequence with a XhoI restriction site. EcoRI adapters were ligated to the blunt-ended cDNA fragments followed by XhoI digestion: The cDNA fragments were directionally cloned into the EcoRI-XhoI restriction site of the pBluescript vector. The ligated cDNA fragments were transformed into DH10B host cells (GibcoBRL). This library was constructed in the laboratory of Dr. Randy Shoemaker."
